Huawei CloudEngine 6863 Switch Datasheet

Huawei CloudEngine 6863 series switches have advanced hardware architecture with 40GE/100GE uplink ports and high-density 25GE access ports.

CloudEngine 6863 series can be used to build a scalable data center network platform in the cloud computing era, or work as core or aggregation switches on campus networks.

Product Overview

Huawei CloudEngine 6863 series switches are next-generation 25GE access switches that provide high performance and high port density on data center networks and high-end campus networks. The CloudEngine 6863 series have advanced hardware architecture with 40GE/100GE uplink ports and high-density 25GE access ports. Using Huawei's VRP8 software platform, CloudEngine 6863 series switches support extensive data center features and high stacking capabilities. In addition, the CloudEngine 6863 series use a flexible airflow design (front-to-back or back-to-front).

CloudEngine 6863 series can work with CloudEngine 16800 or CloudEngine 12800 series data center core switches to build elastic, virtual, and high-quality 40GE/100GE full-mesh networks, meeting requirements of cloud computing data centers.

CloudEngine 6863 series provide high-density 25GE access to help enterprises and carriers build a scalable data center network platform in the cloud computing era. They can also work as core or aggregation switches on campus networks.

Product Appearance

CloudEngine 6863 series switches provide 48*25GE SFP28 ports and 6*40GE/100GE QSFP28 ports.

Product Characteristics

High-Density 25GE Access

- CloudEngine 6863 series provide up to 48 x 25GE ports, allowing for high-density 10GE/25GE server access and smooth evolution.

- CloudEngine 6863 series provide up to 6 x 100GE QSFP28 ports. Each QSFP28 port can also be used as one 40GE QSFP+ port, providing flexibility in networking. The uplink 40GE/100GE ports can be connected to CloudEngine 16800 or CloudEngine 12800 series switches to build a non-blocking network platform.

Inter-device Link Aggregation, High Efficiency and Reliability

- CloudEngine 6863 series support multi-chassis link aggregation group (M-LAG), which enables links of multiple switches to aggregate into one to implement device-level link backup.

- Switches in an M-LAG all work in active state to share traffic and back up each other, enhancing system reliability.

- Switches in an M-LAG can be upgraded independently. During the upgrade, other switches in the system take over traffic forwarding to ensure uninterrupted services.

- M-LAG supports dual-homing to Ethernet, VXLAN, and IP networks, allowing for flexible networking.

ESI Multi-homing Access

CloudEngine 6863 series support RFC-compliant EVPN multi-homing solution. The Ethernet Segment Identifier (ESI) is used to expand EVPN VXLAN gateways from active-active mode to multi-active mode. EVPN VXLAN gateways can work in active-active mode to implement multi-homing access of servers (servers can be quad-homed to EVPN VXLAN gateways).

Virtualized Hardware Gateway, Enabling Quick Deployment

- CloudEngine 6863 series can connect to a cloud platform through open APIs, facilitating unified management of virtual and physical networks.

- CloudEngine 6863 series can work with the industry's mainstream virtualization platforms. The virtualization function protects investments because services can be deployed quickly without requiring network changes.

- The hardware gateway deployment enables fast service deployment without changing the customer network, providing investment protection.

- CloudEngine 6863 series support Border Gateway Protocol - Ethernet VPN (BGP-EVPN), which can run as the VXLAN control plane to simplify VXLAN configuration within and between data centers.

Standard Interfaces, Enabling Openness and Interoperability

- CloudEngine 6863 series support NETCONF and can work with Huawei iMaster NCE-Fabric.
- CloudEngine 6863 series support Ansible-based automatic configuration and open-source module release, expanding network functions and simplifying device management and maintenance.
- CloudEngine 6863 series can be integrated into mainstream SDN and cloud computing platforms flexibly and quickly.

ZTP, Implementing Automatic O&M

- CloudEngine 6863 series support Zero Touch Provisioning (ZTP). ZTP enables the CloudEngine 6863 series to automatically obtain and load version files from a USB flash drive or file server, freeing network engineers from onsite configuration and deployment. ZTP reduces labor costs and improves device deployment efficiency.
- ZTP provides built-in scripts through open APIs. Data center personnel can use a programming language they are familiar with, such as Python, to centrally configure network devices.
- ZTP decouples the configuration time of new devices from the device quantity and area distribution, which improves service provisioning efficiency.

FabricInsight-based Intelligent O&M

- The CloudEngine 6863 provides telemetry technology to collect device data in real time and send the data to Huawei data center network analyzer iMaster NCE-FabricInsight. The iMaster NCE-FabricInsight analyzes network data based on the intelligent fault identification algorithm, accurately displays the real-time network status, effectively demarcates and locates faults in a timely manner, and identifies network problems that affect user experience, accurately guaranteeing user experience.

iMaster NCE-based Simplified Network Deployment

- CloudEngine 6863 series switches can interconnect with iMaster NCE-Fabric through standard protocols such as NetConf and SNMP to implement network automatic management and control, providing more efficient and intelligent operation methods, simplifying network management, and reducing the OPEX.

Flexible Airflow Design, Improving Energy Efficiency

Flexible front-to-back or back-to-front airflow design

- CloudEngine 6863 series use a strict front-to-back or back-to-front airflow design that isolates cold air channels from hot air channels. This design improves heat dissipation efficiency and meets design requirements of data center equipment rooms.
- Air can flow from front to back or back to front depending on the fans and power modules that are used.
- Redundant power modules and fans can be configured to ensure service continuity.

Innovative energy-saving technologies

- CloudEngine 6863 series have innovative energy-saving chips and can measure system power consumption in real time. The fan speed can be adjusted dynamically based on system consumption. These energy-saving technologies reduce O&M costs and contribute to a greener data center.

Clear Indicators, Simplifying Maintenance

Clear indicators

- Port indicators clearly show the port status and port rate. The 100GE port indicators can show the states of all ports derived from the 100GE ports.
- State and stack indicators on both the front and rear panels enable users to maintain the switch from either side.
- CloudEngine 6863 series support remote positioning. Remote positioning indicators enable users to easily identify the switches they want to maintain in an equipment room full of devices.

Simple maintenance

- The management port, fans, and power modules are on the front panel, which facilitates device maintenance.

- Data ports are located at the rear, facing servers. This simplifies cabling.

Licensing

CloudEngine 6863 supports Huawei IDN One Software (N1 mode for short) licensing mode. The CloudFabric N1 business model combines the NCE controller, analyzer, and CloudEngine switch software for use in a range of common scenarios. This simplifies transactions, provides customers with more functions and value, and protects their software investment with Software License Portability.

Product	Feature	N1 Mandatory Software Packages			N1 Add-on Software Packages
CloudEngine 6863 series switch		Foundation	Advanced	Premium	Multi-cloud Multi-DC Value-added Package
	Basic software	√	√	√	
	IPv6	√	√	√	
	VXLAN	√	√	√	
	Lossless upgrade	√	√	√	
	Telemetry	√	√	√	
	NSH		√	√	
iMaster NCE-Fabric controller	SDN automation	√	√	√	
	Basic intent functions (simulation and verification, and network-wide configuration rollback)			√	
	Multi-cloud mMulti-DC function				√
iMaster NCE-FabricInsight analyzer	Basic network analysis functions of telemetry	√	√	√	
	Network health ("1-3-5" intelligent O&M)		√	√	
	Value-added functions for network traffic analysis (managing 100 VMs)			√	
Version mapping		Select one from three options. The Advanced software package contains functions from the Foundation software package.			It is used with the Foundation, Advanced, or Premium software package.

Product	Feature	N1 Mandatory Software Packages	N1 Add-on Software Packages
For details about product function differences, refer to the product documentation.			

Note: V200R005C20, V200R019C10, and later versions can support N1 business model.

Functions and Features

Item	CloudEngine 6863-48S6CQ
Device virtualization	iStack
	M-LAG
	ESI
Network virtualization	VXLAN
	BGP-EVPN
	QinQ access VXLAN
Data center interconnect (DCI)	VXLAN mapping, implementing interconnection between multiple DCI networks at Layer 2
SDN	iMaster NCE-Fabric
Network convergence	PFC and ECN
	RDMA and RoCE (RoCE v1 and RoCE v2)
Programmability	OPS programming
	OpenFlow
	Ansible-based automatic configuration and open-source module release
Traffic analysis	NetStream
	sFlow
VLAN	Adding access, trunk, and hybrid interfaces to VLANs
	Default VLAN
	QinQ
	MUX VLAN
MAC address	Dynamic learning and aging of MAC address entries
	Static, dynamic, and blackhole MAC address entries
	Packet filtering based on source MAC addresses
	MAC address limiting based on ports and VLANs

Item	CloudEngine 6863-48S6CQ
IP routing	IPv4 routing protocols, such as RIP, OSPF, IS-IS, and BGP
	IPv6 routing protocols, such as RIPng, OSPFv3, IS-ISv6, and BGP4+
	IP packet fragmentation and reassembly
IPv6	VXLAN over IPv6
	IPv6 VXLAN over IPv4
	IPv6 Neighbor Discovery (ND)
	Path MTU Discovery (PMTU)
	TCP6, IPv6 ping, IPv6 tracert, IPv6 socket, UDP6, and raw IPv6
Multicast	Multicast routing protocols such as IGMP, PIM-SM, and MBGP
	IGMP snooping
	IGMP proxy
	Fast leaving of multicast member interfaces
	Multicast traffic suppression
	Multicast VLAN
Reliability	Fine-grained microsegmentation isolation (IPv4 and IPv6)
	Link Aggregation Control Protocol (LACP)
	STP, RSTP, VBST, and MSTP
	BPDU protection
	Smart Link and multi-instance
	Device Link Detection Protocol (DLDP)
	Hardware-based Bidirectional Forwarding Detection (BFD)
	VRRP, VRRP load balancing, and BFD for VRRP
	BFD for BGP/IS-IS/OSPF/static route
	BFD for VXLAN
NSH	IETF-defined NSH (IPv4 and IPv6)
QoS	Traffic classification based on Layer 2, Layer 3, Layer 4, and priority information
	ACL, CAR, re-marking, and scheduling
	Queue scheduling modes such as PQ, DRR, and PQ+DRR
	Congestion avoidance mechanisms, including WRED and tail drop
	Traffic shaping
O&M	iPCA
	Network-wide path detection
	Telemetry
	ERSPAN+

Item	CloudEngine 6863-48S6CQ
	Statistics on the buffer microburst status
	VXLAN OAM: VXLAN ping and VXLAN tracert
Configuration and maintenance	Console, Telnet, and SSH terminals
	Network management protocols, such as SNMPv1/v2/v3
	File upload and download through FTP and TFTP BootROM upgrade and remote upgrade
	Hot patches
	User operation logs
	Zero Touch Provisioning (ZTP)
Security and management	Command line authority control based on user levels, preventing unauthorized users from using commands
	Defense against DoS attacks, ARP storms, and ICMP attacks
	Port isolation, port security, and sticky MAC
	Binding of the IP address, MAC address, port number, and VLAN ID
	Authentication methods, including AAA, RADIUS, and HWTACACS
	Remote Network Monitoring (RMON)

Performance and Scalability

Item	CloudEngine 6863-48S6CQ
Maximum number of MAC address entries	256K
Maximum number of routes (FIB IPv4/IPv6)	256K/80K
ARP table size	256K
Maximum number of VRFs	4096
IPv6 ND table size	80K
Maximum number of multicast routes (multicast FIB IPv4/IPv6)	32K/2K
Maximum number of VRRP groups	1024
Maximum number of ECMP paths	128
Maximum number of ACLs	30K
Maximum number of broadcast domains	8K
Maximum number of BDIF interfaces	8K
Maximum number of virtual tunnel endpoints (VTEPs)	2K
Maximum number of LAGs	1024
Maximum number of links in a LAG	128

Item	CloudEngine 6863-48S6CQ
Maximum number of MSTIs	64
Maximum number of VLANs where VBST can be configured	500

Note: This specification may vary between different scenarios. Please contact Huawei for details.

Hardware Specifications

Item		CloudEngine 6863-48S6CQ
Physical features	Dimensions (W x D x H)	442 mm x 420 mm x 43.6 mm
	Weight (excluding optical transceivers, power modules, and fan assemblies/including AC power modules and fan assemblies, excluding optical transceivers, kg)	5.7/7.8
	Switching capacity (Tbps)	3.6
	Forwarding performance (Mpps)	940
10/25GE SFP28 ports		48
40/100GE QSFP28 ports		6
Management interface	Out-of-band management port	1 x GE management interface
	Console port	1 x RJ45 interface
	USB port	1
CPU	Main frequency (GHz)	1.4
	Number of cores	4
Storage	RAM	4 GB
	NOR flash	64 MB
	NAND flash	4 GB
System	System buffer	42 MB
Power supply	Power modules	600 W AC 1000 W -48 V DC 1200 W 380 V HVDC
	Rated voltage range (V)	AC: 100 V to 240 V DC: -48 V to -60 V HVDC: 240 V to 380 V
	Maximum voltage range (V)	AC: 90 V to 290 V DC: -38.4 V to -72 V HVDC: 190 V to 400 V
	Maximum input current	AC 600 W: 100 V to 240 V 8 A 1000 W -48 V DC: -48 to 60 V 30A 1200 W 380 V HVDC: 190 V 8A

Item		CloudEngine 6863-48S6CQ
	Typical power	226 W (100% traffic load, copper cable, normal temperature, dual power modules)
		261 W (100% traffic load, short-distance optical transceivers, normal temperature, dual power modules)
	Maximum power	384 W
	Frequency (AC, Hz)	50/60
Heat dissipation	Heat dissipation mode	Air cooling
	Number of fan trays	4
	Heat dissipation airflow	Front-to-back or back-to-front airflow
	Maximum heat consumption (BTU/hour)	1311
Environment specifications	Long-term operating temperature (°C)	0°C to 40°C (0-1800 m) The temperature decreases by 1°C each time the altitude increases by 220 m.
	Storage temperature (°C)	-40°C to +70°C
	Relative humidity	5% to 95%
	Operating altitude (m)	Up to 5000
	Sound power at 27°C (dBA)	Front-to-back airflow: < 67 Back-to-front airflow: < 66
	Sound power at 40°C (dBA)	Front-to-back airflow: < 84 Back-to-front airflow: < 83
	Sound pressure at 27°C (dBA)	Front-to-back airflow: 53 on average (maximum: 58) Back-to-front airflow: 52 on average (maximum: 57)
	Surge protection	AC power supply protection: 6 kV in common mode and 6 kV in differential mode DC power supply protection: 4 kV in common mode and 2 kV in differential mode
Reliability	MTBF (year)	47.81
	MTTR (hour)	1.95
	Availability	0.9999962836

Networking and Application

Data Center Applications

On a typical data center network, CloudEngine 6863 switches work as TOR switches and connect to CloudEngine 16800 or CloudEngine 12800 or CloudEngine 8800 switches using 40GE/100GE ports, building an end-to-end 100GE full-mesh network. The core and TOR switches use fabric technologies such as VXLAN to build a non-blocking large Layer 2 network, which allows for large-scale VM migration and flexible service deployment.
